IFCS

Take Control
of your in-flight operations, service & revenue through mobile technology

IFCS software offers the most affordable and intuitive solution on the market today.

Galley Planner

There is more to our Galley Planner software than what is online. We have a tablet-based application for the caterers that really sets us apart from the competition.

Improve Communications

Live 2-way communication with real-time revisions and alerts to caterers.

Automated

The loading specs for meals, inventory and equipment required on every flight.

Easy to Use

Intuitive interface let's you customize galley specs in minutes.

Increase Accountability

The app keeps a historical log of who built, sealed and loaded each carrier and cart for every flight.

Statistical Reports

You get a bird's eye view on the efficiency of each kitchen with statistical reports including how long it took to build and seal each carrier and prepare each flight.

Inventory Forecasts

Available for each station for any given period.

Tracking

Builders track all food substitutions and shortages as they build a flight. These changes are communicated to the flight crew in the final loading report from the app.

Sales & Consumption Analytics

You can only improve what you can measure, that's why we created this dedicated analytics app for in-flight services.

Reduce — Increase — Maximize

Reduces waste, increases ancillary revenue and maximizes profits for every flight.

Automated

The provisioning of flights according to route, departure time, origin, destination, season, aircraft type and pax load.

Insightful Reporting

Sale trends and consumption are analyzed for every flight and summarized into useful reports to facilitate strategic planning.

Forecasting made easy

Place your catering orders with confidence knowing that all flights have been properly analyzed and accounted for at each station.

Meal Plan manager

An intuitive interface that let's you manage and update your meal plan information for cabin crew and PAX for every flight.

You're in Control

You simply set the maximum % of waste for each flight, and the system does the rest. Let's you accurately predict what you need, and how much profit you will make.

Flight Crew E-Brief Mobile

IFCS E-Brief Mobile is a simple, cost-effective and comprehensive solution for in-flight information management and reporting. It is designed to be fully functional even in airplane mode.

Easily Monitor and Control

The information transmitted to the flight directors and stations prior to every flight. Flight-Directors simply press 'sync' on their mobile device to access the most up to date information available.

Accessibility

Back-office users can access the software using any modern web-browser, no additional software or hardware is required.

Instantly Sync

Destination information, cabin safety, customs card requirements, special instructions, announcements, IFE manuals, policies & procedures, crew routing, bulletins, memos and more.

Stowage-Locator

Helps the crew find the stowage location for everything on board.

Catering Report

Includes up-to-date information with notifications for shortages, substitutions and special meals.

Maximum Efficiency

Speeds up pre-flight check.

An Integrated Solution

That utilizes a variety of enabling technologies to connect distinct applications. Our middleware is capable of supporting a wide variety of platform needs, including XML, JAVA, C++ and web services.
